

The Patient App

Digital Questionnaire

As part of your individual therapy and monitoring program, the team looking after your heart device may ask you some specific questions about your condition via the Patient App.

The questionnaire is intended for device patients who have or may be at risk for heart failure.

How it works:

1. When your care team wants to know more about your current well-being, they send you a questionnaire. This could occur several times a year.
2. You will receive the digital questionnaire in your BIOTRONIK Patient App.
3. Your answers will be sent automatically and securely back to your care team.
4. The care team will be able to see your answers in the BIOTRONIK Home Monitoring® system. If they have further questions, they will contact you.

A new, digital way of asking: "How are you?"

The digital questionnaire quickly gives me answers to important questions I have about your condition. It is like a quick checkup, done remotely!

Eight questions to answer

When your care team needs to know more about your current well-being, you will receive a questionnaire with eight important questions via the Patient App. You can answer the questions with just a few clicks. When you're finished, they will be automatically sent back to your care team.

Be Actively Involved in Your Care

This personal questionnaire will only be available for you when you and your clinic have agreed to use it as part of your individual home monitoring care program.

Your answers are highly appreciated and will help your care team to evaluate your condition in more detail.

“Using the Patient App to give my clinic an update on my condition turned out to be so easy.”

Learn More?

The digital questionnaire is part of the BIOTRONIK Patient App and the BIOTRONIK Home Monitoring system.
